

Flexan

The Ear Frontier

With Flexan's 40 years of experience in the hearing aid industry Flexan is an excellent provider of creative products solutions for the telecommunications and consumer electronics markets.

Rubber components are essential to the comfort and performance of Bluetooth headsets, cellular phones, and mp3 players like the iPod. As an OEM supplier, Flexan looks to co-develop the next great breakthrough in telecommunications and consumer electronics.

Flexan Benefits:

- Custom material formulations
- Design for Manufacturing (DFM) assistance
- Sound isolating and acoustic damping materials
- In-mold bonding of rubber to metal and plastic substrates
- Global engineering and manufacturing capabilities

Flexan

The Flexan Difference

Flexan's extensive experience with ear based applications has allowed Flexan the opportunity to create solutions that are designed to operate in the unique conditions found in the human ear.

Common materials used in ear based applications include:

- Silicone -Ear buds, domes
- Q-Flex (proprietary material developed by Flexan) – Sound tubes, receiver suspensions, receiver boots
- Fluorosilicone and fluorocarbon - Suspension microphones, tubes

Flexan molds and compounds a full range of thermoset elastomers. What can we mold for you?

For more information please contact your local Flexan Sales Representative or Brian Barhorst Flexan Sales Manager at 773-685-6446.
