Flexan to Collaborate with KSE Scientific to Bring Expanded Medical Device Capabilities to Market

Flexan LLC announced that it is expanding its services to include custom manufacturing of sterile liquids and custom formulated solutions for a variety of medical device applications. Flexan is partnering with its parent company, ILC Dover, and its KSE Scientific division to expand offerings to its medical device customers. KSE Scientific provides standard and custom formulations and packaging while following the most stringent quality standards. The company is FDA registered for medical devices and 510(k) for sterile water and saline. With over 50,000L of Water for Injection (WFI) production capacity per day and more than 113,000 square feet of manufacturing, controlled storage, and laboratory space, KSE Scientific is ready to solve customers' challenges for sterile liquids.

Recently, both Flexan and KSE Scientific partnered to deliver a custom solution and packaging service to Clyra Medical Technologies.

"Clyra is pleased to find a high-quality partner under one roof in KSE Scientific and Flexan, to support manufacturing for our best-in-class wound management and surgical product 'Bioclynse'. Bioclynse is 510(k) cleared by the FDA, and is an efficacious, safe, long-acting wound irrigation solution that can be used during wound management, during surgery and for post-surgical wounds, with no need to rinse out throughout the entire procedure," said Steve Harrison, CEO of Clyra Medical Technologies. "We look forward to working with KSE Scientific and Flexan to support solution manufacturing and developing customized packaging and components to ensure we meet the market demand and customer requirements for delivering our solutions."

"Flexan serves a broad range customers in the medical device market and we are excited to expand our services to include custom sterile fluids for various clinical applications. In addition to adding sterile fluids, we are also excited to share that we are now offering platinum-cured silicone tubing, tubing assemblies and molded components to better serve ILC's biopharmaceutical customers worldwide", said Tony Gonzalez, President of Flexan.
